Antispikes

Set of 8	AntiSpikes combine the advantages of hard coupling with regulated damping. Combining the two methods results an optimal energy transfer from the coupled component, which gives a tight and well structured low end and libarated and open mids and highs. They are suitable for all ground surfaces and allow easy movement of the loudspeaker, whilst protecting the support ground surface. Each AntiSpike can support over 100 kg. They have a diameter of 28mm, a height of 20mm and are supplied with M8 thread.	120
